

4th TASK. RC STIFFENING WALLS IN THE STRUCTURE FROM 3th TASK IN LONGITUDINAL DIRECTION

$T \equiv IV$   
 $W \equiv I$   
 n° of floors = 7  
 $h = 3'9 \text{ m}$   
 $n \times h = 27'3 \text{ m}$

1. WIND LOAD

Characteristic value ( $w_k$ ):  $w_k = q_b \cdot C_e(z) \cdot C_{pe}$

$$q_b = \frac{1}{2} \rho_v \cdot v_b^2$$

$$q_b = \frac{1}{2} \cdot 1'25 \cdot 22'5^2 = 316 \text{ N/m}^2 = 0'316 \text{ KN/m}^2$$

$C_e(z) = 1'9$  for a  $z = 27'3 \text{ m}$  and T.C = IV

$\rho_v = 1'25 \text{ kg/m}^3$   
 (density of air)

For wind load area  $W = I$

$\hookrightarrow v_b = 22'5 \text{ m/s}$

$C_{pe} = 1'3$  (External pressure coefficient)

$$w_k = 0'316 \cdot 1'3 \cdot 1'9 = 0'78 \text{ KN/m}^2$$

$\gamma_s = \text{partial factor}$   
 $\gamma_s = 1.35$

$$w_d = \gamma_s \cdot w_k$$

$$w_d = 1.35 \cdot 0.78$$

$$w_d = 1.053 \text{ KN/m}^2$$

We need linear load in KN/m:

$$w_{k,lin} = w_k \cdot B = 0.78 \cdot 27.7 = 21.61 \text{ KN/m}$$

### 2. VERTICAL LOADS

I estimate 2 walls of length = 5.5m and thickness 250mm.

#### MINIMUM VERTICAL LOAD

The tributing area:

$$A_{trib} = 6.5 \cdot 11 = 71.5 \text{ m}^2$$

$$R_{min} = 7 \cdot 71.5 \cdot 10.13$$

$$R_{min} = 5070 \text{ KN}$$

From TASK 3, the  
 slab load = 10.13 KN/m<sup>2</sup>  
 n° of floors = 7

#### MAXIMUM VERTICAL LOAD

$$R_{max} = 7 \cdot 71.5 \cdot 15.97$$

$$R_{max} = 7993 \text{ KN}$$

From TASK 3, the  
 design load:  
 $f_d = 15.97 \text{ KN/m}^2$

- So the con...
- $C_1$ : Characteristic vertical load  
 $C_1 = 21.61 \text{ KN/m} \cdot 27.3 \approx 5660 \text{ KN}$
- $C_2$ : Design vertical load  
 $C_2 = 1.053 \text{ KN/m}^2 \cdot 27.7 \cdot 27.3 \approx 8078 \text{ KN}$
- $C_3$ : Design wind load + minimum vertical load  
 $C_3 = 1.17 \frac{\text{KN}}{\text{m}^2} \cdot 27.7 \cdot 27.3 + 5070 \approx 5955 \text{ KN}$

CF will be use.

### 3. DESIGN OF GEOMETRY OF THE WALLS

The total bending moment in the foot of all stiffening walls is:

$$M_{uw} = \frac{1}{2} \cdot W_k \cdot L_n \cdot H^2$$

$$M_{uw} = \frac{1}{2} \cdot 21'61 \cdot 27'8^2 \approx 8053 \text{ KN}\cdot\text{m}$$

And the stress from the characteristic wind load:

$$\sigma_w = \pm \frac{1}{m} \cdot \frac{M_{uw}}{W} ; \quad W = \frac{t \cdot L^2}{6} \approx \text{section modulus of one wall}$$

$$W = \frac{0'25 \cdot 5'5^2}{6} = 1'26 \text{ m}^3$$

$$\sigma_w = \pm \frac{1}{2} \cdot \frac{8053 \text{ [KN}\cdot\text{m}]}{1'26 \text{ [m}^3]} \approx \pm 3196 \text{ KN/m}^2$$

Stress from the minimum vertical load:

$$\sigma_N = \frac{R_{MIN}}{A} ; \quad A = t \cdot L = 0'25 \cdot 5'5 = 1'38 \text{ m}^2$$

$$\sigma_N = \frac{5070}{1'38} = 3657 \text{ KN/m}^2$$

Tension is avoid from CF, so the estimated geometry is corrected:

2 walls of  $L = 5'5\text{m}$  and thickness of 250 mm

2 walls of height 27'8m

#### 4. DESIGN OF REINFORCEMENT

$$C2: M_{u1} = \frac{1}{2} \cdot w_d \cdot H^2 = \frac{1}{2} \cdot 117 \frac{\text{KN}}{\text{m}^2} \cdot 27.7 \text{m} \cdot 27.32$$

$$M_{u1} = 12077 \text{ KN} \cdot \text{m}$$

$$\sigma_w = \pm \frac{1}{2} \cdot \frac{12077}{1.26} = \pm 4792.5$$

$$\sigma_N = \frac{7993}{1.38} = 5813$$

→ No tension

$$C3: \sigma_w = \text{same as in } C2 \rightarrow \sigma_w = \pm 4792.5$$

$$\sigma_N = \text{same as in } C1 \rightarrow \sigma_N = 3687$$

↳ Tension

↓

REINFORCEMENT

#### VERTICAL REINFORCEMENT

$$0.002 \cdot a_c \leq a_{s,v} \leq 0.04 \cdot a_c$$

$$S_v \leq \min(3t; 400) \text{ mm} = (3 \cdot 250; 400) = 750 \text{ mm}$$

$$a_c = 250 \cdot 1000 = 25 \cdot 10^4 \text{ mm}^2$$

$$500 \leq a_{s,v} \leq 10000 \text{ mm}^2$$

$$a_{s,v} = 500 \text{ mm}^2$$

$$\phi 8 \text{ a } 200 \text{ mm} \rightarrow a_{s,v} = 2 \cdot 251 \text{ mm}^2/\text{m}$$

#### HORIZONTAL REINFORCEMENT

$$a_{s,h} \geq \max(0.25 \cdot a_{s,v}; 0.001 \cdot a_c)$$

$$S_h \leq 400 \text{ mm}$$

$$a_{s,h} \geq \max(0.25 \cdot 500; 0.001 \cdot 25 \cdot 10^4)$$

$$a_{s,h} \geq \max(125; 250) \text{ mm}^2$$

$$a_{s,h} = 250 \text{ mm}^2$$

$$\phi 8 \text{ a } 400 \text{ mm} \rightarrow a_{s,h} = 2 \cdot 126 \text{ mm}^2/\text{m}$$

## COMPRESSED REINFORCEMENT

$$N = \sigma \cdot t \cdot 1m$$

$$N = 8677 \cdot 0.25 \cdot 1$$

$$N = 2169.3 \text{ KN}$$

The required area of vertical reinforcement is:

$$A_{s, req, v} = \frac{N - 0.8 \cdot A_c \cdot f_{cd}}{\sigma_s}$$

$$A_{s, req, v} = \frac{2169.3 - 0.8 \cdot 0.25 \cdot 1 \cdot 16.67 \cdot 10^3}{400 \cdot 10^3} = -0.0029 < 1 \quad \checkmark$$

$$\sigma_s = 400 \text{ MPa}$$

$$f_{cd} = 16.67 \text{ MPa}$$

for C 25/30

## TENSILE REINFORCEMENT

$$N = 904.5 \cdot 0.25 \cdot 1$$

$$N = 226.13 \text{ KN}$$

$$f_{yd} = 434.78 \text{ MPa}$$

for B500S

$$A_{s, req, v} = \frac{N}{f_{yd}} = \frac{226.13}{434.78 \cdot 10^3}$$

$$A_{s, req, v} = 0.00052 \text{ m}^2 = 520 \text{ mm}^2$$

$$A_{s, req, v} = 520 \text{ mm}^2 > A_{s, v} = 500 \text{ mm}^2$$

So,  $\phi 8$  a 150 mm  $\rightarrow A_{s, v} = 2.335 \text{ mm}^2/\text{m}$

and  $\phi 8$  a 400 mm  $\rightarrow A_{s, H} = 2.126 \text{ mm}^2/\text{m}$
